

Aurubis Beerse was there right from the start, in 2015. Given their complex industry and the necessity of 24/7 operations they were looking for a trusted and specialized partner for continuous NOC and SOC services.

About Aurubis

Aurubis is specialized in circular economy, recycling non-ferrous materials. Aurubis Beerse focuses more on complex alloys and materials. To process those complex materials, they set up production processes ideated and designed by their own R&D. In order to secure their knowledge capital, it's important to safeguard this process from the outside world – especially as it is saved electronically. That's why they count on NOC and SOC services of spotit.

Interested in our spotit SOC or NOC?

Do you wish to enjoy the same level of 24/7 protection of your critical assets and production processes? Reach out to us via info@spotit.be or give us a call: +32 (0)9 394 44 41

Challenge

Aurubis is active in a very specific industry, requiring optimal security and safety. They developed their own production processes and need to secure their knowledge capital, while remaining operational 24/7.

Solution & offering

Aurubis counts both on managed NOC and SOC services to guarantee 24/7 operations. The spotit NOC and SOC guarantee availability and business continuity while reducing risks and protecting Aurubis' crown jewels.

Our NOC and SOC managed services ensure a thorough 24/7 monitoring and additionally, whenever necessary, Aurubis can rely on fast interventions to keep their networks up and running optimally and available 24/7.

They rely 100% on spotit to maintain their network and security in optimal condition and to keep on acquiring the knowledge to stay up to date on new developments and possible threats.

"Spotit is an extension to our own IT team"

We work so close together with spotit that we consider them as an extension of our own department. This way, we can unburden our IT & Operations team to focus on other important projects withing the company.
